

Advancing Dissemination & Implementation Sciences Working Group:

Equity-focused Dissemination & Implementation Sciences in Clinical Research, Clinical Practice, and Communities

This NCATS-supported WG leverages CTSA and PBRN models to advance equity-focused D&I sciences across the translational science continuum, increasing impact of clinical and translational research, enhancing healthcare systems, and expanding D&I capacity across the hubs.

The 2023-25 Goals are to

1. Advance critical links between research and practice communities by expanding engagement and implementation sciences and defining best practices in Practice-Based Research Networks.
2. Build equity-focused D&I capacity among clinical and translational researchers and implementers through consensus competencies, model curricula, and enhanced access to successful programs.

Work is accomplished in subgroups formed around a particular project, such as surveying PBRNs in CTSA, expanding online resources for accessing D&I training programs, and connecting D&I concepts to learning health systems.

Dissemination & Implementation Across the Continuum

To Engage in the D&I WG, contact the new co-leads below:

Kathleen R. Stevens (Stevensk@uthscsa.edu)

Jonathan N. Tobin (Jtobin@rockefeller.edu)

Reza Yousefi-Nooraie (Reza_yousefi-nooraie@urmc.rochester.edu)
